

INTEGRATED VOICE EVACUATION SYSTEM

VX-2000 SERIES

DESCRIPTION

The TOA VX-2000 Series broadcast system is designed for both general-purpose and emergency broadcasts. It is comprised of the System Manager, Surveillance Frame, Power Amplifiers, Power Supply unit, Emergency Power Supply, and a user-specified number of Remote Microphones. The system complies with the EN60849 Standard and its failure detection circuitry operates continuously to check components and speaker lines for any irregularities. If detected, failure warnings are provided by way of an LED indicator and a buzzer.

INSTALLATION EXAMPLE

Installation Example of the Hotel

The location is a hotel where Building A is linked with Building B. Building A was built earlier, and Building B added later. The original public address system was expanded by adding a VX-2000SF to cover Building B.

Installation Example of the School

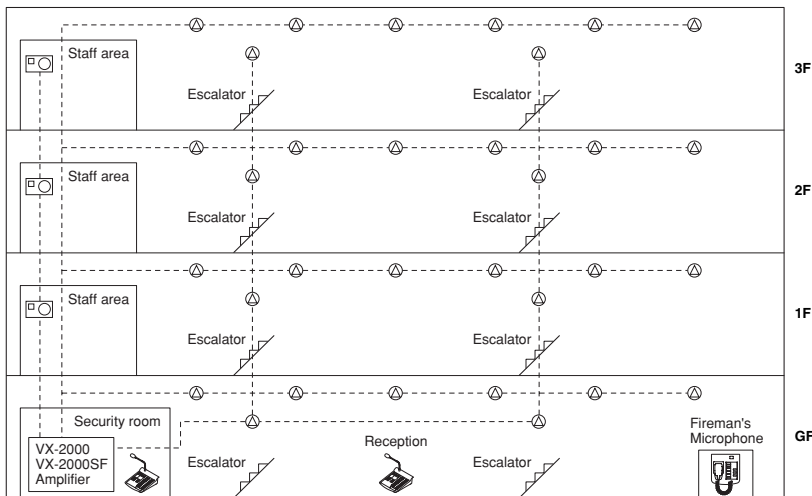

- The EV-200 can be set to broadcast chimes, programmed announcements, etc. at regular daily intervals using the software timer.
- Output from the local powered mixer used in the gymnasium can be interrupted by broadcasts from the VX-2000 when an urgent call is made.
- The Remote Microphones installed in the teachers' room and the Staff area can make individual zone calls to other buildings. System failure modes can also be indicated on RM-200X + RM-210 x 2.
- In the gymnasium, the local VM-2120 amplifier is installed. Broadcast is switched from the local VM-2120 amplifier operation to the central VX-2000 system operation by the VX-200SZ's external attenuator control signals.

INSTALLATION EXAMPLE

Installation Example of the Department Store

- The key factor in this system application is simultaneous broadcast.
- BGM sound is broadcast from CD player.
- Pre-recorded messages are played back to any zones you had set, when software timer activates the EV-200.

OPTIONS

EV-350R Digital Announcer

- LCD-displayed operation guides and handy selection dial facilitate recording and playback.
- Holds up to two memory cards.
- The combination of two sampling frequencies (32 kHz and 44.1 kHz) and four recording grades ("Long", "Normal", "High" and "Extremely High") permits selection of up to eight levels of recording sound quality to best suit a given situation.

- Recorded sentences can be combined into complete messages and played back as a program.
- Up to 256 programs can be played back.
- Up to 256 or 1,024 sentences (changeable) can be recorded (when two memory cards are installed).
- Two different messages can be simultaneously output to two different locations.
- In emergency situations, emergency messages can be set to override current programs. (Emergency messages must be pre-recorded.)
- Recording, playback, erasure, and stop can be remotely controlled by external equipment.
- Detachable front cover protects the memory cards from tampering.

* Optional adapter required for CompactFlash* card recording/playback using the EV-350R.

IT-450 Input Transformer

The IT-450 input transformer can be used to isolate AUDIO INPUTS 1-3, the remote microphone, as well as the telephone paging input on the VM-2120/2240. Each transformer must be installed individually for an input to be isolated.

Impedance: 600Ω ±10%
Frequency Response: 200 – 10,000Hz
